

## CHAPTER 6

# THINK OUT OF BOX

*“How you think and what you do*

*Will serve your progress*

*Else it is not intelligent living”*

Everyone wants to follow the thought that says the same sentence “THINK OUT OF BOX” by working differently and smartly and bring innovation. But no one shows the path of how to work differently from others. Here is a very simple way of doing so. Those who had done something different are not from Jupiter but live on the same Earth, they are one of us. But the way they work is different from others.

Now let us understand this concept more deeply.

### **CHALLENGE TO FORTUNE**

Just think about the person who is studying engineering in a private college paying fees lakhs per annum already lost his parents having two younger sisters one in 10 other in 12 class. He is also paying their sibling fees as well as giving them his time from his busy schedule and is just like his parents to direct on the right path. Just think about it for a single second how he can manage this?

The task is not easy but he does it by doing a part-time job and giving tuitions to students if you were at his place, would you? Here you can judge the determination and struggle of a 21-year-old boy. Actually, how a person thinks similarly he reacts and even big things become small.

### **DOING MULTITASKING**

Develop the tendency of doing multitasking which means simultaneously delivering the things, working on more than one thing in a single time. It will bring something new with you. Just think you are studying in your graduation (BE, MBBS, BCS, B.com whatsoever) simultaneously you can also prepare for competitive examination like IAS(Indian administrative service), SCC(Staff Selection Commission), CGL(Combined Graduate Level), CDS(Combine Defense service) and many more.

### **WHAT DOES DIFFICULT EXAMINATION NEEDS**

Now how to prepare for such an exam there are some basic things or topics are general science(GS), History, geography, physics, chemistry, biology, politics, English, aptitude. The vast part consists of general science because it increases use memory and capturing power while on the other hand, English brings

## *THE MELANGE OF SUCCESS*

good communication skill and understanding of language. Just think you become an IAS officer than no one is going to ask you that when the battle of Panipat takes place?

The main motto of introducing GS is you can control and manage large amounts of data and information in your mind in a shorter way.

As you are pursuing any degree than your thinking is not limited to only that particular degree “think out of the box” we should have knowledge about issues which you can get by reading the newspaper, listening to news Akashwani, BBC news on Radio. Just listen to some news first in English than in Hindi you will feel quite comfortable in English and vice versa. Apart from all this, we must have knowledge of the constitution of India and also should have an interest in politics we must aware about the leaders and ministers who are ruling another country we must raise our voice against any mistreating or violence chapter. Also, use the fundamental right and follow fundamental duties quite aware of other countries also. Give some time to think over the worldwide problems like Terrorism, population, pollution, etc. When all these things come in your life you find yourself quite different from others and gain knowledge to some extent.

### **ALL IN ONE**

I remember the real story of my friend who is a B.Tech student interested in literary particular in debate and poetry, also do stand-up comedy being a state-level badminton player, good anchor, also work in the social organization do all these think simultaneous, without affecting his academics. Only your mindset is required after that everything moves smoothly. If you are good in singing, dancing, literature, theatre, public speaking, politics also try in these fields because you do not know when your luck comes with you so try to express your talent, the time when you are performing whether you perform good or bad but some audience will definitely like and love your performance the reason behind it is at least you have potential within you to move on stage and face the audience.

### **WHAT THE OTHER THINGS**

Sometimes we keep on thinking about,

What others will think?

What happens if we fail in any particular work?

How people will react when you put your 100% attempt?

If you work out on unformulated facts even then this attempt will make you strong. It will bring in you. It will make you stand apart from others because of the experience you gain from the mistake that helps you to estimate the parameter. Even small effort matters.

### **SECRETNESS IN PLAN**

## *THE MELANGE OF SUCCESS*

What you are doing apart from others there must be secrecy in your plan or work until or unless you achieve success. The thing is quite simply never give others a chance to laugh at you. If someone laughs than do not care about them and ignore him.

Suppose you are writing a book, first you have to plan for it. You have to find a topic, time limit up to when you have to complete it, who will be the publisher. During this planning never share it with anyone once you have a complete whole book or when 10-20 pages are left only then slowly start disclosing this shows your sincerely and how to determine you are towards your work. Once you are habitual about success than definitely, you will become a successful person. At the beginning, you will face problems but those who overcome the problem they win the world. Because people never afraid of the depth of danger or problem and every time ready to fight with it.

### **SCORPION IN POND**

I remember a little story years ago a guru was walking at the time of dusk with his shishya (student) and he saw a scorpion falling in a pond. Scorpion trying to come out of the pond but every time he fails and he thought to help him to bring out of the pond and ultimately bring it out, but unfortunately the scorpion stung him and fall back in the pond he again brings it out by his hand but scorpion again stung him. This scene happened four times after a lot of patience his shishya ask him.

Gurudev you are well aware of the tendency of a scorpion, still you are doing the same mistake. Gurudev answered wonderfully

“It being a scorpion he cannot forget his tendency than being a human how I can forget humanity”. It shows how differently you think and work.

### **GREAT MIND ARE NOT BORN BUT MAN MADE**

No one has great minds by birth and god made all equally but people become special and different from others by their devotion toward the task. They struggle continuously and find their own path which is new and different and ultimately becomes a symbol of motivation and inspiration for others. While most of us just habitual of clapping for others and only praise them, never try to do something new. So think differently and proceed with that work.

Even history provides us a lot of evidence that those who work differently they are always remembered even after leaving this world because of their great deeds.

Swami Vivekanand while addressing the conference in the USA starting his speech with the words “Brother and Sister” of American and change the pattern of “ladies and gentlemen”. Similarly, courage is required to do big and great works. Once you start with any different work with new thinking then never see back. Initially, you might be diverted and face difficulties. But once you become habitual of facing difficulties, you will start thinking about its solution and ultimately mind become habitual of solving the problem. So think positively and differently from today’s one words.
