

## CHAPTER 2

# INSTITUTE SELECTION

*“The selection is self-creation*

*Our life is built by selecting*

*One thing at a time, one decision*

*At a time and one step at a time”*

Selecting a city and institute for education is a big decision for a student because it is the turning point of our life which further decides our carrier.

### **HOW CITY AND INSTITUTE MATTERS**

After choosing a proper city for study and education, the time comes to choose a precise institute which can full-fill all the needs of education or competition exams preparation. The thing which is to be kept in mind before joining any institute is faculty, fee structure, strength of classrooms, doubt counter availability, whether the institute is well known or not.

### **FACULTY AND FEES STRUCTURE**

- Many points are mentioned above but among them two points are important which are “fee structure” and “faculty” so let us move on one by one.
- Firstly we have to talk about the faculty which is most important parameter to judge institute. Because a worthy teacher can make student successful. Faculty are those persons with whom you are spending one third of everyday time. So it is important to judge your faculty before choosing institute. They not only teaches you but also creates a stamina and interest for you to sit 8 hours in a class. Apart from this they also have responsibility to motivate students bring them back to the right path when they got diverted. Faculty or teachers do not limited to the lecture class only. When student lives away from their parents or guardian then it is also responsibility of teachers to behave with them as their parents share and solve their problem in frank way.
- ❖ Now second thing is that one should be well aware about the fees structure. Student must think about the income source of parents, but they doesn't do so. There might not be any probability that if you got admit in one institute than after one or two weeks try to change your institute because here you have loss of two thing “wastage of money” and another “losing concentration” on study. Actually students neither thought nor care about the source of their parents earning.
- ❖ There are lot of students whose parents sell their land from which they get food for two time and creating a way to give good and best education to their children. Unfortunately students never

## *THE MELANGE OF SUCCESS*

think about it before changing their institution. Students must think and never do such rubbish things which can spoil their career.

As seen from data there are many students whose parents are auto drivers, footpath vendors, rishka drivers, farmers, newspaper sellers having such low salary professions even they support their son, daughter to study in the big institute by doing hard work day and night.

Sometime you might be misguided by many people, if you are facing a problem in any particular subject they suggested you join individual tutor it means apart from your institute go to other teachers to clear doubts about that particular subject. Actually, this is totally wrong guidance because if you are paying to institute than why not ask your doubts over there.

Just think if you used your 8 hours in coaching institute than how can you thought about another tutor separately. Apart from this, you have to also do your daily homework so this suggestion is totally waste of money and time. If really you are facing problems in any topic of any subject go for a doubt time separately and solve your problem with faculty or teachers of the same institute during working time and for more go through books.

So friends try to ignore such things which can divert you from your aim. Be positive and concentrate on your aim and destination for which you are doing day and night hard work.
